Gary –

Attached is a Contour Map run for Napthalene at 48-inchs. Just wanted you to confirm that this is the type of map that you want.

Looking at the data tables, you can see that Arsenic was above screening levels in just about every sample. I believe there were similar results for previous sampling data, but Arsenic was not considered a site COC. Since it seems to be naturally high, I told Patrick to just to run the elevated organic compounds.

Do you have a contact number for Greg Powell at ERT?

Jeff:

I have put up a epaosc site and have you added as someone that can modify the site. Please post pics, data tables, flexviewer link (under links) and anything else that appears to be appropriate.

The contact person for ERT is Greg Powell and I will be contacting him shortly.

Thanks
